Smart water
dispensing system

Saunum AutoLeil

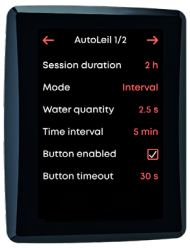

In a modern relaxation sauna, all you have to do is simply enjoy a good, moist sauna. You don’t even need to throw the water on the heated stones yourself. Saunum AutoLeil is a smart and self-learning device that automatically controls the water supply to the heater, creating and maintaining an even sauna climate according to the sauna user’s preferences.

In a good sauna, **humidity** is just as important as temperature. **Saunum AutoLeil** is an accessory for Saunum heaters that can **automatically dispense water onto the hot stones**, helping you control the humidity in the sauna room.

AutoLeil connects to a **Saunum AirIQ control unit** and is configured on its touchscreen control panel.

In **Humidity mode**, it uses sensor readings to help maintain your selected humidity level.

In **Interval mode**, it dispenses water at the intervals you choose.

The amount of water dispensed can be adjusted in both modes.

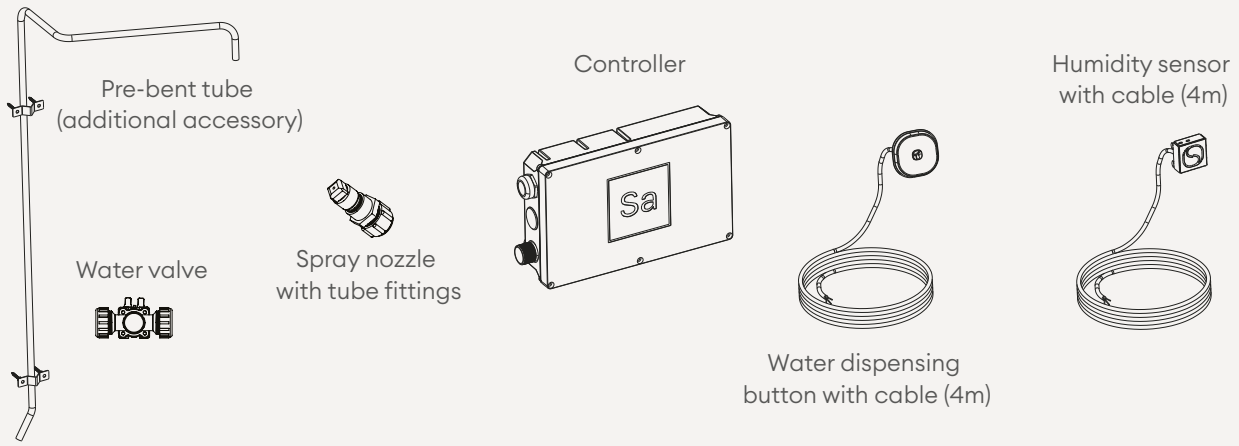

You can also add water **yourself** using the included illuminated **AutoLeil Button**. To use the button without automatic dispensing, enable it and turn off Ready mode. The button also works alongside the automatic modes: press it to dispense water, or press and hold it to switch automatic dispensing on or off.

With automatic dispensing enabled, AutoLeil follows your chosen settings once the sauna is ready, helping create a comfortably humid sauna before you step inside.

By default, AutoLeil's operating time matches the sauna session, but you can set it to end earlier.

Requirements/restrictions: Only works with Saunum AirIQ control unit.

Included in the package: Controller, humidity sensor with cable (4 m), spray nozzle with tube fittings, electric water valve, water throwing button with cable (4 m).

Add-ons: A pre-bent stainless steel pipe for Saunum heaters and additional AutoLeil buttons for dispensing water from multiple locations in the sauna.
